Date Mon 22/06/2026 07:41
To prachi.porwal06@gmail.com <prachi.porwal06@gmail.com>; Harshvardhan Panchal <harshvardhanpanc145@gmail.com>

Hello Team,
I have gathered all MOM from mobile and kept it below for your referral.

1. Project Overview

1.1 Product Vision

Zinto is a **multi-vendor hyperlocal quick commerce platform** designed to allow customers to discover, search, and order products from nearby stores through a mobile-first application experience.
The platform is intended to support:

- Multi-vendor operations
- Multi-city operations
- Hyperlocal commerce workflows
- Large-scale product inventory (lakhs of products)
- High traffic and scalable architecture
- Category/subcategory-driven catalog management
- Seller subscriptions and commission-based business models
- Advanced order lifecycle management
- Dynamic pricing and charge components
- Search, recommendations, and store discovery
- Scheduled/future order workflows
- Refunds, returns, partial cancellations, and replacements
- Admin-driven configurability across platform operations

2. Core Product Scope & Scalability Requirements

2.1 Database / Schema / System Design Expectations

The database architecture and schema design must be created in a way that it can accommodate **all present and future functionalities** of the platform.
System must support:

- Multi-vendor platform architecture
- Multi-city operations
- Lakhs of products in inventory
- Categories and subcategories
- Packaging categories
- Transferable / transaction-based category structures if needed
- Orders / payments / cancellations / refunds / returns / partial cancellation / replacement / complaint workflows
- Coupon / offer / subscription / discount modules
- Future feature additions
- High traffic load
- Scalable search and discovery
- Scalable order management and operational workflows

2.2 Technical Expectations

The platform architecture should support:

- Loose coupling between modules
- Scalable component structure
- API-ready models and backend architecture
- Secure authentication
- Efficient search and API handling
- Future extensibility without schema redesign
- Support for role-based flows across Admin / Seller / Customer / Logistics

3. Business Model & Platform Operating Structure

3.1 Multi-Vendor Model

The platform will operate as a **multi-vendor marketplace** where multiple sellers/stores can onboard and sell products.

3.2 Multi-City Model

The platform should support **multi-city operations**, where business rules such as commissions, delivery, and seller/store operations can be configured city-wise.

3.3 Hyperlocal Commerce Model

The platform is intended for hyperlocal commerce / quick commerce use cases, with nearby seller/store discovery and short delivery workflows.

4. User Roles & Panel Segregation

The system will have multiple role-based panels and responsibilities.

4.1 Customer Panel / Customer App

Customer should be able to:

- Register / login
- Browse products and stores
- Search products and sellers
- Add products to cart
- Place orders
- Place scheduled/future orders
- Track order status in real time
- Cancel order under allowed conditions
- Raise cancellation request
- Request refund / complaint within allowed period
- Accept/reject replacement suggestions
- Reorder previous orders
- Rate/feedback on delivered order
- Add seller/store to favourites
- View previous orders

4.2 Seller Panel

Seller should be able to:

- Login to seller portal
- Manage shop/store profile
- Add and manage products
- Manage product listing
- Set product pricing
- Manage stock/inventory
- Publish future-order / pre-book products
- View and process incoming orders
- Accept orders
- Pack orders
- Suggest replacement products
- Shift delivery to next day where applicable
- Cancel orders with reason

- Upload / capture delivery-time proof photo
- Manage future-order configuration for selected products
- View settlement-related data if settlement module is enabled
- Operate with platform logistics or self-delivery mode based on admin/business rules

4.3 Admin / Super Admin Panel

Admin / Super Admin should be able to:

- Create seller/vendor accounts
- Send seller credentials and app links via email
- Manage seller onboarding
- Manage subscription plans
- Manage commission configuration
- Manage orders and complete order lifecycle
- Monitor all orders in super admin panel
- Approve cancellation requests
- Assign logistics after packing
- Manage homepage configuration
- Manage banners, categories, featured products, offers, seller highlights
- Manage seller recommendations for offline sellers
- Configure refunds category-wise
- Configure odd-hour charges, weather fees, delivery charges, platform charges etc.
- Manage advertisements / Super AD placements
- Configure dynamic sections and platform rules
- Add/edit seller products on behalf of seller
- Manage seller shop setup on behalf of seller
- View and manage seller settlement and bulk-order settlement, if applicable

5. Seller Onboarding & Vendor Management

5.1 Seller Account Creation

Admin should have the ability to create vendor/seller accounts.

5.2 Seller Credential Delivery

Once vendor account is created:

- Vendor login credentials should be shared through email
- Seller application link should also be shared through email

5.3 Vendor Management

Admin should be able to manage vendor accounts and seller onboarding process centrally.

6. Seller Subscription Model & Seller Limitation

6.1 Seller Product Limitation

A seller can onboard/register **up to 30 products** under the base subscription model.

6.2 Post-30 Product Rule

If a seller wants to add more than 30 products:

- Seller must choose a monthly subscription plan

6.3 Non-Subscription Case

If seller does not choose subscription after the allowed product limit:

- Higher commission levels should be applied

6.4 Seller Business Model

Seller model can operate on:

- Subscription basis
- Commission basis

This should be configurable as a business model from platform/admin side.

7. Commission Management System

7.1 Dynamic Commission Structure

Commission structure should be dynamic and configurable.
It should support configuration based on:

- City-wise commission
- Shop-wise commission
- Category-wise commission
- Sub-category-wise commission
- Product-wise commission
- Sub-product-wise commission
- Add-on product-wise commission

7.2 Shop-Level Commission

Shop-level commission must be supported.

7.3 Additional Commission Components

System should support additional commission and charge structures such as:

- User commission
- Shop commission
- Category commission
- Platform commission

7.4 Seller Price Input & Final Price Logic

Seller will input the base price per product.
On top of that, the platform may apply:

- Commission
- GST
- Packing charges

At cart / order level, additional charges may be added such as:

- Handling fees (conditional)
- Platform fees (conditional)
- Weather surcharge
- Odd hours surcharge
- Delivery charge
- Platform charges

7.5 Commission Control Rule

Seller provides product data and price, but **commission should not directly go to seller**.
Commission and its application/control should be handled by admin/platform.

8. Pricing, Charges, Fee Components & Invoice System

8.1 Invoice Components

The invoice system should include a detailed breakup of:

- Product Cost
- Handling Fees
- GST
- Delivery Fees
- Bad Weather Fees
- Odd Hours Charges
- Packaging Charges where applicable
- Platform-related charges if applicable

8.2 Charge Types Supported

The platform should support dynamic and configurable charge components such as:

Product-Level / Category-Level Charges

- Commission
- GST
- Packaging charges

Cart / Order-Level Charges

- Handling fees
- Platform fees
- Delivery charge
- Weather surcharge / bad weather fees
- Odd hours surcharge
- Platform charges

8.3 GST Invoice

Auto-generated GST invoices should be available for:

- Customers
- Sellers

8.4 Dynamic Configuration of Charges

Packaging, handling, delivery, weather-based charges, odd-hour charges and related commercial components should be configurable from admin panel.

9. Order Timing Rules & Order Placement Restrictions

9.1 General Order Timing Restriction

No order placement should be allowed after **10 PM**.

9.2 Odd Hour Delivery Handling

Odd-hour delivery support and odd-hour charges should be configurable from admin panel.

10. Packaging Charges & Packaging Logic

10.1 Category-Based Packaging Charges

Packaging charges should vary based on:

- Product category
- Handling requirement
- Packaging complexity

Example discussed:

- Sweet boxes may require extra packaging effort/time, therefore extra packaging charges may apply.

10.2 Packaging Categories

The system and schema should be designed in a way that packaging categories / packaging charge logic can be supported.

11. Product Catalog, Product Rules & Inventory Management

11.1 Product Management

Seller should be able to manage:

- Product details
- Product images
- Product description
- Product pricing
- Product stock/inventory
- Category / store association

11.2 Product Description Ownership

Product description details will be provided/managed by seller.

11.3 Out-of-Stock Product Visibility

Products that are **out of stock should not be displayed** in the customer application.

11.4 Time-Based Category & Product Rules

The system should support category/product rules based on **time of day**.
This means platform may need to support:

- Time-based category availability
- Time-based product availability

12. Admin-Controlled Seller Product Listing & Shop Management

12.1 Super Admin Visibility of Seller Product Listings

Super Admin should be able to view all products listed by each seller.
This should include visibility into:

- Seller-wise product listings
- Product details entered by seller
- Product status, pricing, category, stock and related listing information
- Seller-shop-wise product mapping

12.2 Product Entry by Super Admin on Behalf of Seller

Super Admin should be able to create/add product entries on behalf of a seller.
This means the system should allow admin to:

- Select a seller/store
- Add products under that seller's shop
- Enter product details, pricing, category, stock, description, images and other required listing data
- Publish/manage the product listing for that seller

12.3 Product Editing by Super Admin

Super Admin should be able to edit seller product listings whenever required.
Admin edit capability should include:

- Product name/details
- Product description
- Product category/subcategory
- Product pricing
- Stock/inventory details
- Product images
- Product visibility / listing status
- Future-order related configuration if applicable
- Add-on / mapping / packaging-related product configuration if applicable

12.4 Full Shop Setup / Shop Management on Behalf of Seller

Super Admin should be able to set up and manage the seller's shop/store on behalf of the seller.
This should include the ability to configure/manage:

- Shop/store profile details
- Shop banners / shop media / about shop details
- Shop category mapping
- Product listing under the shop
- Commission configuration / business configuration where applicable
- Seller operational setup needed to make the shop live on platform

12.5 Admin Override / Assisted Seller Management Use Case

The system should support an **admin-assisted seller management model**, where the seller may either manage their own shop/products or the Super Admin may perform the setup/entry/update tasks on behalf of the seller.

This is important for cases where:

- Seller is not technically managing the portal
- Admin onboarding team is handling initial shop setup
- Product listing or shop management needs to be centrally controlled/assisted

13. Category & Catalog Structure

13.1 Category Hierarchy

The platform should support:

- Categories
- Subcategories
- Product categorization
- Shop category navigation
- Packaging-related category structures if needed

13.2 Category Model Expectations

Category model should support:

- Category name
- Category image
- Subcategories
- Slug

14. Search & Discovery Module

14.1 Search Types Supported

Platform should support multiple search and discovery methods:

Product Search

- Text search / keyword search
- Real-time suggestions
- Search history
- Trending searches

Voice Search

- Microphone-based search
- Speech-to-text support
- Interactive listening UI

Seller / Store Search

- Direct seller search
- Search stores directly
- Seller-wise product search

Category Search

- Search by category
- Grid-based category browsing UI
- Sub-category navigation

14.2 Smart Search & Recommendation Layer

The platform should support:

- Smart recommendations
- Auto suggestions
- Intelligent product discovery

14.3 Search Results Behaviour

Architecture should support showing:

- Search & discovery results
- Store results
- Product/category result combinations where needed

There was also discussion that **category/product and store results may need to be handled simultaneously**, so architecture should be flexible for that.

15. Map-Based Search & Discovery

15.1 Search Store by Map

The system should support **searching stores via map**.

15.2 Map-Based Banner / Discovery Use Cases

There was discussion around:

- Search store by map
- Banner function with map integration

This should be considered in discovery/home/store visibility design.

16. Recommendation, Add-On & Cross-Sell Module

16.1 Intelligent Add-On Product Suggestions

System should support add-on recommendations / cross-selling suggestions.
Examples discussed:

- Umbrella + Torch
- Dosa + Chutney

16.2 Add-On Product Support in Data / Commission Model

Since add-on product commission was discussed separately, add-on products should be treated as a supported commerce object within pricing / commission / product logic.

17. Shop / Store Module

17.1 Store / Shop Section in Customer App

Store pages should be attractive and premium in presentation.

Store Section UI Requirements

- Premium store cards
- Store logo
- Store banners
- Ratings
- Delivery estimates
- Modern animations / gradients

17.2 Shop Module Details

Shop page / store module should support:

- Video banner on shop page
- Shop + YouTube banner display
- Signature products section
- “About My Shop” section

17.3 Store Model Requirements

Store model should support:

- Store details
- Ratings
- Operating hours

- Delivery radius

There was also discussion around delivery target expectations such as **12–15 minutes**, though it was not confirmed as a final committed SLA.

18. Seller Logistics Flexibility / Logistics Participation Model

18.1 Seller Not Mandatory to Opt Platform Logistics

Seller should **not be mandatorily bound to use platform logistics**.
The platform should support flexibility in logistics participation based on seller/store setup and business rules.

18.2 Supported Logistics Modes

Seller logistics configuration should support one or more of the following modes:

- Platform-assigned logistics
- Seller self-delivery / self-managed logistics
- Hybrid / configurable model, if business requires

18.3 Admin Logistics Control

Admin should be able to configure whether a seller:

- Uses platform logistics
- Uses self-delivery / self-managed logistics
- Is allowed to operate in both models depending on store/business rules

18.4 Order Flow Impact

Where platform logistics is applicable:

- Admin can assign logistics after seller packing

Where seller is operating in self-delivery mode:

- Order flow should support seller-managed fulfillment accordingly

19. Advertisement & Promotional Visibility Module

19.1 Banner Management

System should support banners for:

- Homepage
- Promotional sections
- Store/shop visibility
- Redirect-based banners if needed

19.2 Super AD

A **Super AD / premium advertisement placement** module should be supported for high-priority/premium seller visibility.

20. Terms & Conditions / Consent Requirements

20.1 Mandatory Acceptance

Users and sellers must accept **Terms & Conditions** during:

- Registration / onboarding
- Checkout

20.2 Accept & Agree Checkbox

“Accept & Agree” checkbox should be mandatory wherever T&C acceptance is required.

21. Customer Application – Frontend Functional Scope

21.1 Login / Signup Page

Customer app should include:

- Modern authentication UI
- OTP verification
- Email login
- Mobile login
- Responsive mobile-first design

21.2 Home Page

Home page should include:

- Search bar
- Delivery location
- Promotional banners
- Trending products
- Recommended stores
- Offers / recommended offers

21.3 Search Features

Frontend must support:

- Text search
- Voice search
- Search by store
- Search by category

21.4 Attractive Store Section

Frontend store section should have premium UI, strong discoverability, and engaging design.

21.5 Client UI Expectations

Client specifically emphasized:

- Premium UI quality
- Search should be fast and intuitive
- Store browsing should be highly attractive

22. Home Page Configuration & CMS-Style Admin Control

22.1 Dynamic Homepage

Home page sections should be dynamic and configurable from admin panel.

22.2 Admin-Managed Homepage Sections

Admin should be able to manage:

- Banners
- Categories
- Product sections
- Featured products
- Offers
- Seller highlights

23. Backend Models / Database Models

The following core models were explicitly discussed and/or implied by the MOMs and business rules:

23.1 Core Discussed Models

- Customer Model
- Cart Model
- Product Model
- Order Model
- Category Model
- Banners Model
- Store Model

- Offer Model
- Transaction Model

23.2 Model Details from MOM

Customer Model

Should support:

- Full name
- Email
- Mobile number
- Address
- Location
- Wishlist
- Order history

Cart Model

Should support:

- Product references
- Quantity
- Pricing
- Store references

Product Model

Should support:

- Product details
- Product images
- Pricing
- Stock management
- Category reference
- Store reference

Order Model

Should support:

- Customer reference
- Product references
- Delivery details
- Payment status

Category Model

Should support:

- Category name
- Category image
- Subcategories
- Slug

Banners Model

Should support:

- Banner images
- Redirect links
- Active status
- Priorities

Store Model

Should support:

- Store details
- Ratings
- Operating hours
- Delivery radius

Offer Model
Should support:

- Discount details
- Coupon codes
- Expiry
- Usage limits

Transaction Model
Should support:

- Payment method
- Transaction ID
- Refund status
- Payment status

23.3 Additional Practical Models Implied by Requirements
Based on full functional scope, architecture should also plan for modules/models such as:

- Seller/Vendor model
- Subscription model
- Commission model
- Refund model
- Complaint model
- Wallet model
- Notification model
- Logistics model
- Seller availability model
- Add-on product mapping
- Advertisement / Super AD model
- Future Order / Scheduled Product configuration model
- Seller settlement model / payout ledger
- Bulk-order settlement tracking model
- Admin-assisted shop/product management support structure if separate mapping/audit is required

24. Order Management – Complete Lifecycle
24.1 Order Status Visibility
User should get **clear and real-time order status visibility**.
24.2 Order Status Flow
Order status flow should include:

1. Order Placed
2. Order Received
3. Order Accepted
4. Order Packed
5. Logistics Assigned
6. Out for Delivery
7. Delivered
8. Cancelled
9. Refund Initiated (if applicable)

All status updates should be visible to the user.
24.3 Real-Time Order Tracking
Users should be able to track orders in real time.

25. Order Management Responsibilities by Role

25.1 Admin Responsibilities

- All orders will be reflected in Super Admin panel
- Admin monitors and manages the complete order lifecycle
- Admin can update and manage orders
- Admin assigns logistics after seller completes packing where platform logistics is applicable

25.2 Seller Responsibilities

- Seller views incoming orders
- Seller accepts and processes orders
- Seller packs orders
- Seller may suggest replacement products
- Seller may shift order to next day where applicable
- Seller must upload/capture delivery-time photo as proof during delivery
- Seller can cancel order with valid reason
- Seller may fulfill through platform logistics or self-delivery based on seller logistics mode configuration

26. Scheduled Orders / Future Order / Pre-Booking Module

This section consolidates all scheduled order discussions and the newly added future-order logic.

26.1 Scheduled Orders

Users should be able to place **scheduled orders for a future date and time**.

26.2 Seller Future Order Panel

Seller should have a dedicated **Future Order / Pre-Booking panel** in the seller portal to publish products that are intended to be sold/delivered on a future date instead of immediate delivery.

26.3 Future Product Configuration by Seller

Seller can mark a product as **Future Order / Pre-Book Product** and configure:

- Future delivery date
- Future delivery window
- Booking availability period
- Applicable delivery duration / scheduling range

26.4 Advance Booking Window

Customer should be able to book future-order products in advance **up to 1 month only**.

Rule

- Future order / pre-book products can be booked in advance
- Advance booking should be restricted to a maximum **1-month booking window**

26.5 Cart Validation for Future Products

If a customer adds a future-order product to the cart, the system must check whether any cart item has a future sale/delivery date.

26.6 Mixed Cart Scheduling Rule

If **at least one future-order product** exists in the cart:

- The **entire order should be treated as a scheduled delivery order**
- All products in that cart/order will be delivered on the **future scheduled date/window** applicable to that future-order product

This means if a customer adds a future-dated product together with regular/immediate products, then the system should align the complete order to the future delivery schedule of that future-order product.

26.7 Cart Page as Scheduling Page

When a future-order product exists in the cart:

- Cart page should behave as a **Scheduling Page**
- System should show only the valid available future delivery dates for that product/order

- Customer should be allowed to select only those dates that are configured by the seller for that future-order product

27. Cancellation Management

27.1 User Direct Cancellation Rule

User can cancel the order **before seller accepts the order**.

27.2 Post-Acceptance Cancellation Rule

After seller acceptance, user cannot directly cancel the order.

27.3 Cancellation Request Flow

User can raise a **cancellation request** before logistics assignment.
Only Admin can approve and cancel the order after reviewing the request.

27.4 Seller/Admin Cancellation

Seller and Admin can cancel orders.

Mandatory Rule

Seller must provide a valid cancellation reason.

28. Cancellation Types / Alternative Fulfillment Flows

System should support multiple cancellation/fulfillment scenarios.

28.1 Shift Order to Next Day

If product is available but cannot be delivered today:

- Seller can move/shift the delivery date to next day

28.2 Partial Cancellation

If user orders multiple products and some items are unavailable:

- Unavailable products can be cancelled
- Remaining products can continue processing / delivery

28.3 Product Replacement Suggestion

If a product is unavailable:

- Seller can suggest another available product
- Ideally replacement should be same price (as discussed in one MOM)
- User can accept or reject replacement

28.4 Partial Fulfillment / Split Availability Handling

If some products are unavailable in an order, the system should support scenarios such as:

- Cancel unavailable items and refund the amount
- Deliver available items
- Provide updated delivery timeline for unavailable items
- Offer replacement product with customer confirmation

28.5 Delivery Extension

If order cannot be fulfilled on planned date:

- Vendor/Seller can extend delivery date

29. Refund, Wallet Refund & Complaint Management

29.1 Refund Access Window

Refund and complaint options should be available only within **24 hours after delivery**.

29.2 Refund Countdown

User should see a countdown timer, such as:

- “Refund/Complaint available for X hours Y minutes”

29.3 Category-Based Refund Control

Admin can enable/disable refunds based on product categories.

29.4 Wallet Refund for Cancelled Items

If some items in an order are cancelled/unavailable:

- Corresponding amount should be refunded to the **customer wallet**

29.5 Refund Types to Support

System should support:

- Full refund
- Partial refund
- Cancellation refund
- Wallet refund where applicable

29.6 Complaint Management

Complaint option should be available within the same post-delivery allowed window.

30. Seller Settlement & Bulk Order Settlement Module

30.1 Seller Settlement Management

The platform should support a **Seller Settlement module** to manage payout/settlement of seller earnings for completed orders.

30.2 Settlement Scope

Seller settlement should be calculated after considering:

- Product selling amount
- Applicable commissions
- GST/tax components where relevant
- Packaging / handling charges sharing rules if applicable
- Refund deductions
- Partial cancellation adjustments
- Replacement impact, if any
- Platform charges or settlement deductions, if applicable

30.3 Settlement Status Tracking

Admin should be able to track seller settlement status such as:

- Pending settlement
- Processing settlement
- Settled
- On hold
- Adjusted / deducted due to refund or cancellation

30.4 Settlement Rules

Settlement logic should be configurable based on business rules such as:

- Settlement after order delivery
- Settlement after return/refund window completion
- Settlement after deduction of platform commission and applicable charges
- Settlement hold in case of complaint/refund/cancellation dispute

30.5 Seller Settlement Visibility

Seller panel should show settlement-related details such as:

- Total payable amount
- Order-wise settlement amount
- Commission deductions
- Settlement history
- Settlement status

30.6 Bulk Order Seller Settlement

If the platform supports **bulk orders / large quantity orders**, then seller settlement should also support **bulk-order-specific settlement logic**.

Bulk Order Settlement Considerations

The system should be able to handle:

- Separate settlement calculation for bulk orders if business rules differ
- Bulk order commission / margin rules
- Partial fulfillment or partial cancellation impact on seller payout
- Settlement adjustment if bulk order delivery happens in multiple stages
- Admin visibility of bulk order settlement breakdown

30.7 Admin Settlement Controls

Admin should be able to:

- View seller settlement summaries
- View order-wise seller payable amount
- Apply settlement deductions/adjustments
- Hold/release settlement
- Manage bulk-order settlement cases if applicable

31. Seller Availability Handling

31.1 Offline Seller Scenario

If seller status is offline:

- User should get suggestions for alternative sellers

31.2 Admin Role

Admin should be able to manage seller recommendations / alternate seller suggestions.

32. Notification System

Users should receive notifications for every important order update, including:

- Order placed successfully
- Seller accepted the order
- Order packed
- Logistics partner assigned
- Order out for delivery
- Order delivered
- Cancellation updates
- Refund updates

33. Post-Order Features / Customer Engagement

33.1 Feedback & Rating

Customer should be able to provide:

- Order feedback
- Rating / review

33.2 Reorder

Customer should be able to reorder previously placed orders.

33.3 Favourite Seller

Customer should be able to add seller/store to favourites.

33.4 Previous Orders

Customer should be able to view previous orders / order history.

34. Deliverables & Development Direction Discussed in MOMs

34.1 Frontend Deliverables Discussed

- Authentication screens
- Home page UI
- Search modules
- Store discovery pages / attractive store section

34.2 Backend Deliverables Discussed

- Database schemas
- API-ready models
- Relationship definitions

34.3 Action Items Discussed Across MOMs

- Finalize scheduled order workflow
- Implement stock visibility logic
- Define refund, cancellation, and replacement process
- Implement order tracking functionality
- Set up vendor onboarding via email
- Develop admin order management features
- Develop home page UI
- Implement search features
- Design attractive store section
- Create database schemas for discussed models
- Define model relationships
- Prepare for UI review / schema review / feature prioritization discussions

35. Final Product Owner Summary

Zinto is being designed as a **large-scale multi-vendor hyperlocal commerce platform** with a strong focus on:

- Seller onboarding and flexible seller business models
- Dynamic commission and pricing logic
- Category/store/product-level configurability
- Premium customer-facing UI
- Search-heavy product/store discovery
- Smart recommendations and add-on selling
- Configurable homepage and advertising support
- Full order lifecycle visibility
- Flexible cancellation / refund / replacement workflows
- Real-time notifications and post-order engagement
- Scheduled orders and seller-driven future/pre-book product publishing
- Flexible logistics participation model for sellers
- Seller settlement and payout handling
- Admin-assisted product listing and seller shop setup
- Scalable architecture for multi-city, high-traffic operations

The platform should be implemented with **clear role-based separation across Customer, Seller, Admin, and operational modules**, while ensuring that business rules remain configurable and future-ready.
