Executive Summary

The **Reward Engine** is a configurable marketing and customer retention module built around **four core components**:

- **Cashback** – Encourage repeat purchases through wallet credits and future shopping vouchers.
- **Rewards** – Incentivize customer engagement with milestone, loyalty, and promotional rewards.
- **Coupons** – Drive targeted sales using flexible discount and promotional campaigns.
- **Referral** – Expand the customer and seller network through structured referral incentives.

All four modules should be centrally managed by the **Super Admin**, while allowing **Sellers** to run their own promotional campaigns within configurable limits. This approach creates a scalable, rule-based reward ecosystem that benefits the **Customer** (more value), **Seller** (higher sales and retention), and **Platform** (greater engagement, growth, and revenue).
