

Zinto Manual Testing Guide

Requirements Traceability — Client Acceptance Testing Pack

This pack contains 9 step-by-step guides that let you personally click through the Zinto platform — as a customer, a seller, an admin, and a delivery partner — and confirm that every requirement discussed for the project actually works in the live app. Every guide is written in plain, everyday language: no technical terms, just "tap this, you should see that."

How to use this pack

- Each guide below is its own PDF. Open them one at a time, in the suggested order.
- You will need test logins for the customer app, the seller portal, the admin panel, and (for Part 6) the delivery partner app. Ask your development team for these if you don't already have them.
- Every test inside a guide is numbered and tagged with the original requirement reference (e.g. "Ref: Req #41") so it can be traced back to the requirements sheet.
- Each test ends with an **Expected Result** — compare what you actually see on your screen to that line. If it matches, tick it off; if not, note it down for your development team.
- Part 9 is different from the rest — it's a short reference document for background/technical items that aren't separate button-clicks, and simply points back to the other 8 guides.

Suggested testing order

1. Start with **Part 1** and **Part 2** as a regular customer — this is the experience your own end users will have.
2. Move to **Part 3** (Seller Panel) using a seller test account, to see how a shop owner manages products and orders.
3. Then test **Part 4** and **Part 5** (Admin Panel) using an admin test account, to see how the platform is configured and controlled.
4. Test **Part 6** (Delivery/Logistics) to see how an order gets a delivery partner and is delivered.
5. Use **Part 7** to walk through full order journeys end-to-end (placing, scheduling, cancelling) across all three apps.
6. Use **Part 8** to check the money side — refunds, wallet credits, and seller payouts.

7. Finally, skim **Part 9** for the background items that the earlier 8 guides already proved work.

The 9 Guides

1

Customer App — Shopping Experience

Registering, browsing stores and products, the shop page, ads/banners you see, terms & conditions at checkout, login/home/search screens, and post-order actions (feedback, reorder, favourites, order history).

01-Customer-App-Shopping-Experience.html

2

Search, Discovery & Notifications

Text/voice/category/seller search, smart recommendations, map-based store discovery, add-on suggestions, and every push notification a customer should receive during an order.

02-Search-Discovery-Notifications.html

3

Seller Panel

Seller login, shop profile, product/stock management, subscription and product-limit rules, choosing a delivery mode, processing orders, future/pre-book products, and settlement visibility.

03-Seller-Panel-Guide.html

4

Admin Panel — Catalog & Shop Management

Admin/super-admin overview, product catalog rules, admin adding/editing seller products, setting up a shop on a seller's behalf, category management, and homepage content control.

04-Admin-Panel-Catalog-Management.html

5

Admin Panel — Business Rules, Commission & Pricing

Platform-wide checks (multi-vendor, multi-city, scale), commission configuration, pricing/charges/invoice breakdown, order-timing rules, and packaging charge logic.

05-Admin-Panel-Business-Rules-Pricing.html

6

Delivery / Logistics Flow

How an order gets assigned to a delivery partner (or handled by seller self-delivery), the rider's pickup-to-delivery steps, and the different logistics modes a seller can choose.

06-Delivery-Logistics-Guide.html

7

Order Lifecycle, Scheduling & Cancellations

The full order status journey end-to-end, scheduled/future orders, advance booking, and every cancellation rule — before acceptance, after acceptance, and the admin approval flow.

[07-Order-Lifecycle-Scheduling-Cancellations.html](#)

8

Payments, Seller Settlements & Refunds

Refund and complaint windows, wallet refunds, refund types, and the full seller payout/settlement journey including bulk-order settlements and admin controls.

[08-Payments-Settlements-Refunds.html](#)

9

Platform Overview & Behind-the-Scenes Foundation (*reference only*)

Architecture, database, and internal data-model items that aren't separate clickable tests — this document explains each one in plain language and points to which of Parts 1–8 already proves it works.

[09-Platform-Overview-Technical-Foundation.html](#)
